

SAPPHIRE MAT

2026-1

The essence of the Sapphire mat is a rigid solid piece of sapphire. The overall rigidity and resilience of sapphire dampens vibrations in the records caused by needle chatter, sound feedback from the loudspeakers and the platter itself. It must be used with weight clamp.

Material:	sapphire
Size:	dia 288 mm x 4 mm
Mass:	1115-1130 g

It is best to remove the old mat and put the sapphire mat directly on the top surface of the platter. Due to the smooth surface of the mat, a thin air film is created when you put a record on the spinning platter, which creates very low friction between the mat and the record. To increase friction, it is best to use a weight clamp like the Sapphire clamp.

When replacing the old mat with new- do not forget to change VTA/SRA to compensate for the difference in mat thickness between both mats.
